RE:

ALBION-SHERIDAN TOWNSHIP LANDFILL, ADDITIONAL QUESTIONS REGARDING

DATA PACKAGES

Dear Pat:

I have one additional general question about Case 18937 - Organics to WRI. This is one of the data packages that I had previous questions, on which were relayed to you in a January 20, 1993 letter. It is my understanding that you are going to contact me on February 10, 1993 regarding our inquiries.

When reviewing the semi-volatile organic data, we noticed that the laboratory analyzed some of the samples as medium concentration and they also diluted some of the samples. The samples were sent in as low concentration as there was no reason to believe that they would be medium concentration. This resulted in high detection limits with no compounds detected. The samples in which this occurred are as follows; EMC06, EMC07, EMC12, EMC39, EMC46, EMC47, EMC95, EMC96, and EMC98.

I would like to know the justification for the dilutions and analysis at medium concentrations. Could you please also include this letter for ESATs consideration when re-reviewing this data package? Thank you.

I would also like to inquire about the status of the following Albion-Sheridan Township Landfill data packages; Case 19238, Case 19266, Case 19292, and SAS 7652E. The sampling activity for these Cases occurred between December 7 and December 23, 1992. This data is critical to our investigation and it would be useful for me to know when we might expect it. Thank you for your assistance.

Sincerely yours,

WW ENGINEERING & SCIENCE, INC.
